

# LOOK OUT BELOW

Underground electricity cables could be right where you're about to dig.

That's why planning is key to keep you, your crew, and our network safe. You could be seriously hurt or worse if you hit a cable. It could also cause power cuts or project delays.

Use the free BeforeUDig service for maps of underground cables, pipes and other utilities in the area. If you're unsure, arrange for scanning before penetrating the ground.

If your work is within 4 metres of live electrical equipment, get a close approach consent.

As your local lines company, we'll tell you the safe distances you can work and any safety measures to follow. Visit our website to learn more.

**Plan ahead to  
keep everyone  
safe**

**Use beforeUDig  
to be aware of  
underground  
cables**

**Apply for a  
close approach  
consent**
