# SAFE IS A 4 METRE WORD

Four metres is the minimum safe distance when working near power lines, pole-mounted equipment and underground cables.

Electricity can 'jump' so you or your gear don't even need to touch the line to risk a harmful electric shock, or worse.

Getting too close to our equipment is dangerous and can also cause power cuts and project delays. It's a safety thing, and it's also the law.

If you need to work closer than 4 metres, apply for a close approach consent.

As your local lines company, we're here to help. Let's keep you and your crew safe. Visit our website to learn more.

**Stay 4 metres  
from power  
lines and other  
electrical assets**

**Apply for a  
close approach  
consent**
